Art Unit: 2115

1. This action is in response to the application filed on July 30, 2001. Claims 1-15 are pending.

2. The following is an examiner's statement of reasons for allowance:

The cited art generally describes delaying a plurality of data signals in order to align the data signals for sampling using a clock signal. Nguyen et al further describes detecting upper and lower points of a sampling window and calculating the midpoint of the window. Nguyen et al also describe using a fine delay for providing better alignment of the data signals based on process, voltage and temperature parameters.

The claimed invention is allowable over the art of record because the art of record does not teach or suggest an apparatus, storage medium or method for transmitting data among processors over a plurality of parallel data lines and a clock signal line comprising selecting a data phase from a plurality of data phases in a delay chain, checking for a round-off error in the selected data phase and setting a round-off error flag when the round-off error is present and adjusting the selected data phase to compensate for the round-off error when the round-off error flag is set as claimed in independent claims 1, 6 and 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
